TachoDrive TIMER Information

TachoDrive TIMER (TD TIMER) is an electronic timer that works with digital tachographs compliant with Commission Regulation (EU) No 1266/2009.
According to some tachograph manufacturers, it allows a longer driving time up to 45 minutes per day *

TD TIMER transmits information to the driver, in a visual and audible way, about the possibility of changing the activity – start driving, in accordance with the "1-minute" rule in digital tachographs.

While using the TD TIMER and the 1 minute rule, i.e. while moving the vehicle upon the demand of a competent authority or terminal official, the driving activity will not be recorded in the tachograph memory. However, the tachograph records the speed and stores it in its memory for a minimum of 24 hours. Therefore, it is recommended to make a daily printout with a description why the vehicle had to be moved in case of an inspection.

TD TIMER reads standard signals generated by the tachograph on B or D socket.
TD TIMER does not affect the work of the tachograph in any way, that is, does not change the data recorded and displayed by the tachograph.

The user should use the TD TIMER in accordance with the guidelines described in: SOCIAL LEGISLATION IN ROAD TRANSPORT – GUIDANCE NOTE 3
The manufacturer shall not be responsible for the use of the device in contrary to regulations in force in a given country.
